Transtech Technologies

Renewable Energy Solutions

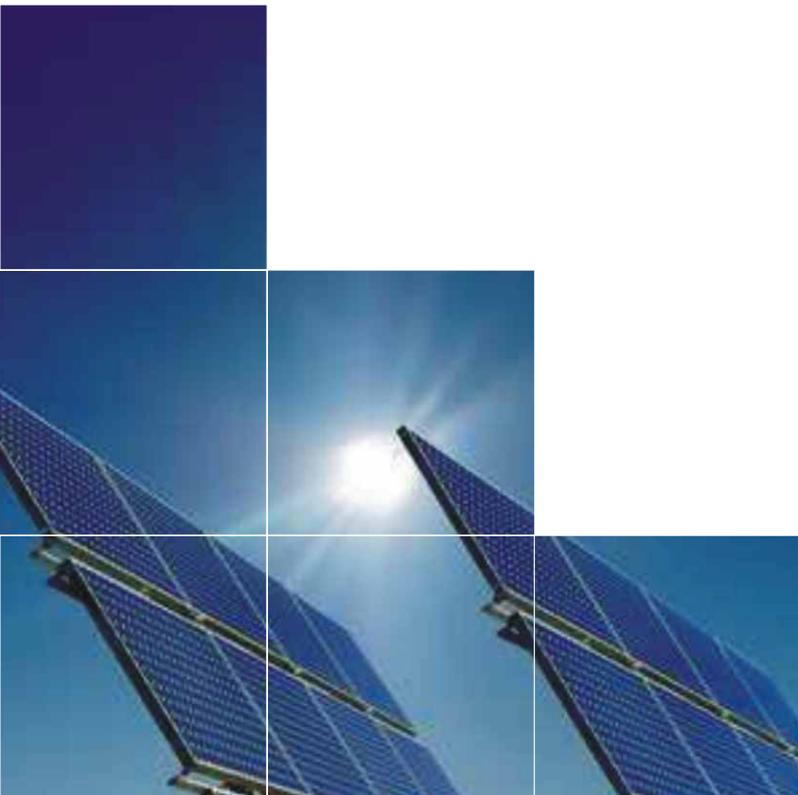

Transtech Technologies Inc. has been an Energy efficiency pioneer since 1987, working in the efficient devices and controls business.

Transtech Technologies now offers solutions that simplify renewable energy, allowing you to significantly reduce your costs over time and improve the value of your business. Flexible financing options allow you to work within your budget and needs.

Benefits

- Freeze rate increases on your utility bills
- Significantly cut your energy costs over time
- Make your energy budget predictable
- Take advantage energy rebates and subsidies*
- Take advantage of available tax credits*
- Offset energy tax burden
- Improve shareholder value
- Improve your bottom-line
- Become an energy producer
- Take advantage of enhanced marketability and public-relations
- Create a green and eco-friendly business image
- Reduce your carbon footprint

* See <http://www.dsireusa.org/> for applicable federal, state, and regional benefits

Products Offered

Photovoltaic (PV) Solar Energy Systems

Directly harness the power of the largest generator in our solar system. The worldwide photovoltaic industry has seen an average 35% annual growth rate over the last 10 years, and it continues to advance. We offer customized or prepackaged PV Systems.

Wind Energy Systems

The amount of wind usually has an inverse relationship to the amount of sunlight at any given time. For this reason, a wind turbine may be an integral balancing component to increase the overall efficiency of a renewable energy system. We offer multiple wind turbines for commercial or residential applications

Solar Water Heating (Solar Thermal)

One of the most efficient renewable technologies, solar thermal can offset your annual hot water demand by 60% or more. Return on investment is especially fast for these systems.

Services Offered

Site Assessment and Energy Analysis

Working with you, we will determine your energy usage and needs, make recommendations for efficiency improvements, and develop an overall energy profile. We will also conduct a survey of the installation site and determine how to maximize the benefit of the system.

System Design, Installation, and Maintenance

Based upon your energy profile and the site assessment, we will design a system, conduct the installation, and provide long-term maintenance.

Grant Writing and Tax Incentive Analysis

We will take the complexity out of obtaining grants and incentives by conducting the necessary research and completing the necessary paperwork with you.

Assistance with Financing Options

We will help you figure out what options are available to offset your cost of creating a sustainable business. Our goal is to alleviate your company's tax burden by funneling allocated tax dollars into an appreciating asset that will produce clean, free energy for decades to come.

Post-Installation Marketing and Public Relations Support

We realize that your strategic decision to invest directly in renewable energy benefits you, us, and the industry alike. We will work with you to determine how to best promote your decision and spread the word.
